SEVERITY TREND

Axis zoomed: full scale is 0–10

Avg severity last 7 days vs. previous 7 days: **3.3 vs. 2.6** **(+29% increase in severity)**

1. Trigger point injection — Jan 23, 2026
2. PT course started — Apr 23, 2026

Note: each patient varies in their perception of symptoms. Mild, moderate and severe vary per person. Recommend focusing on changes from baseline.

SEVERITY BY SYMPTOM ACROSS THE TREATMENT COURSE

	Before Trigger point injection* (estimated)	After Trigger point injection (22d)	After PT course started (169d)
Shoulder pain	7.5	6.7 (-11%)	4.6 (-31%)
Night pain	7.0	6.8 (-2%)	3.9 (-42%)
Weakness	5.5	5.3 (-3%)	2.6 (-51%)
Stiffness	6.0	5.7 (-5%)	2.8 (-50%)
Average	**6.5**	**6.1 (-6%)**	**3.5 (-43%)**

Each column is the interval following that procedure; in parentheses, the change from the column to its left. Green indicates at least a 20% reduction in severity, and red at least a 20% worsening in severity.

** Estimated by the patient as there were no daily logs before this procedure. Patients tend to overstate retrospective severity ratings, so the change shown may overstate the response.*

Trigger point injection — Jan 23, 2026

No days with severity ≥20% below the pre-procedure average.

PT course started — Apr 23, 2026

Severity ≥20% below the pre-procedure average on 125 of 139 logged days; longest unbroken stretch 111 days.
